

Eliminate Wind Damage and Keep Your Banners Tight and Straight With Our Patented BannerSaver™ Pole Bracket System!

- *Spring loaded / Wind spilling*
- *Spills 87% of the wind*
- *Certified and installed on five continents*
- *Wind tunnel tested*

BannerSaver™ Bracket System

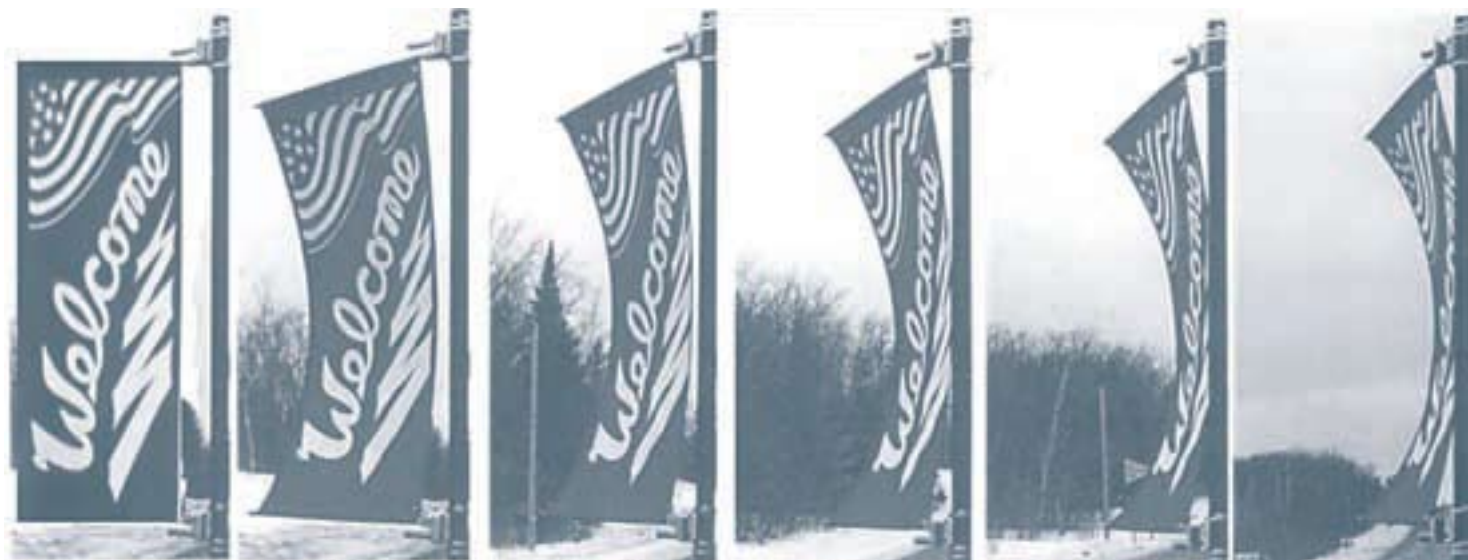

The only true performance bracket...
Wind Tunnel Tested, Spilling 87% of the wind!

Wind is a banner's worst enemy. Each day that the wind kicks up, your banners take a beating. With BannerSaver™ Brackets your banners remain taut as winds reach approximately 105 KPH. As this happens your banners tip with the wind in proportion to its speed. The more the wind blows, the more the BannerSaver™ brackets release... saving your banners and light poles!

Here's how it works :

As the wind blows, your banners "tip" to spill the wind, keeping your banners and poles intact...

0 to 40 KPH

56 KPH

72 KPH
